**McCarus-Volker FORNISEE® SYSTEM**

**READ THIS PRODUCT INSERT THOROUGHLY BEFORE USE**

**FIG. 1** McCarus-Volker FORNISEE® SYSTEM

**DESCRIPTION**
The LSI SOLUTIONS® FORNISEE® SYSTEM provides a uterine manipulator technology for use in laparoscopic surgery, including Laparoscopically Assisted Vaginal Hysterectomy (LAVH), Total Laparoscopic Hysterectomy (TLH) and Laparoscopic Supracervical Hysterectomy (LSH) procedures. FS® SOUNDS and FS® DEVICES are designed to allow for anatomical manipulation of both retroverted and anteverted uteri. The FORNISEE® SYSTEM includes a custom distal cup that can displace the cervix away from the ureters, help define and create the bladder flap and highlight the colpotomy incision landmarks.

**FIG. 2** McCarus-Volker FORNISEE® SYSTEM DEVICES

**INDICATIONS**
The McCarus-Volker FORNISEE® SYSTEM is intended for use as a uterine manipulator in laparoscopic hysterectomy surgical procedures to identify the vaginal fornices and manipulate the uterus.

**2A. FS® SOUND**
- ROTATIONAL ANCHOR
- ANGLED SHAFT
- CERVICAL STOP
- TEXTURED HANDLE
- SOUND LATCH
- DIRECTION INDICATOR
- THREADED COUPLER (Not Shown)

**2B. FS® DEVICE**
- CERVICAL CUP
- VAGINAL OCCLUDER
- INCISION RIDGE
- DEVICE SHAFT
- KEYED SHAFT
- KNURLED KNOB

READ THIS PRODUCT INSERT THOROUGHLY BEFORE USE
PRESCRIPTION USE
Federal (U.S.A.) law restricts these devices to sale, distribution and use by, or on, the order of a physician.

CONTRAINDICATIONS

- Minimally invasive surgical procedures should only be performed by physicians having adequate training and familiarity with endoscopic techniques. In addition, medical literature should be consulted relative to techniques, complications and hazards prior to the performance of minimally invasive procedures.
- The McCarus-Volker FORNISEE® SYSTEM devices are not intended to be used with components from any other company’s uterine manipulators or alternative device components.
- Do not use this technology under conditions in which excessive tissue compression or tension can lead to tissue damage. For example, do not use the FS® SOUND or FS® DEVICE through an excessively narrow, restrictive or deformed vaginal canal or pelvic floor, which could significantly impair smooth passage and safe use of these devices.
- The McCarus-Volker FORNISEE® SYSTEM should not be used in patients who are suspected of being pregnant or who are pregnant, who have an intrauterine device in place, who are planning gamete intrafallopian transfer, or in patients for whom the surgeon deems it inadvisable or finds it difficult to insert the angled tip of the FS® SOUND or the distal cup of the FS® DEVICE.

WARNINGS

- Read and become familiar with all instructions, warnings, and cautions before using this product. Improper use of this system or any intrauterine instrument can result in perforation of the uterine wall, injury to the pelvic floor or internal structures and subsequent bleeding.
- The McCarus-Volker FORNISEE® SYSTEM is designed for use in patients in whom a uterus is present and the intraoperative positioning of the uterus, fallopian tubes and ovaries is desirable.
- Users should be familiar with surgical procedures and techniques involving uterine manipulation before employing the McCarus-Volker FORNISEE® SYSTEM in patients.
- Acceptable surgical practice must be followed with respect to transvaginal uterus access and positioning.
- The McCarus-Volker FORNISEE® SYSTEM is indicated for use for transvaginal uterine manipulation during gynecologic surgical procedures. Applications other than these indications damage the device making it unsuitable for continued use.
- When performing colpotomy do not use laser with this product.
- Do not use plastic distal cervical cup as a backstop for the colpotomy incision; create colpotomy incision inside of incision ridge, which is inside of the illumination seal. Thermal cutting against the distal FS® DEVICE may melt or damage the cervical cup and illumination seal.
- Do not resterilize the FS® DEVICE. The performance of the FS® DEVICE after cleaning or other reprocessing has not been verified and is not supported by LSI SOLUTIONS®.
- Discard opened, unused, expired or damaged devices or devices in damaged primary packaging.
- NON-STERILE: FS® SOUNDS are provided NON-STERILE. Each FS® SOUND must be cleaned and sterilized before use. See reprocessing instructions below.
- Do not use the LSI FS® SOUND if it cannot be reprocessed according to the validated procedures listed below.
- Do not use a damaged or defective FS® SOUND. Carefully inspect the FS® SOUND before surgical use and before sterilization based on the procedures listed below.
- Do not use the integrated FS® LIGHT WAND prior to initiation of the colpotomy incision.
- Do not connect the FS® LIGHT WAND threaded coupler to a fiber cable or turn on light source until the vaginal fornical dissection is about to commence.
- Do not use illumination with Xenon light sources that have power greater than 300W.
- Do not use fiber bundles (light cables) with fiber diameter of greater than 5mm with the FS® LIGHT WAND, to reduce the risk of tissue injury or burns.
- Use the minimum light output necessary to transilluminate tissue structures. With the FS® LIGHT WAND connected to a light source at high output, the transparent seal area of the FS® DEVICE may exceed 41°C due to the light energy emitted.
- Only use the FS® LIGHT WAND illumination during dissection of vaginal cuff. When the FS® LIGHT WAND is connected to the light source, avoid touching the tip of the FS® DEVICE with patient tissue, flammable, or combustible materials, as burns or permanent damage may result.
- Do not place the fiber cable coupler directly on patient or flammable material. The connection between the FS® LIGHT WAND and the light source can become very hot. Be careful when handling.
- Turn off the light source and remove the optical cable from the FS® DEVICE when the FS® DEVICE is removed from the patient.
- The FS® LIGHT WAND should NOT be used with light sources that do not have an IR filter, or that have had the IR filter removed.

PRECAUTIONS

- Minimally invasive instruments may vary from manufacturer to manufacturer. Before endoscopic instruments and accessories from different manufacturers are employed together in a procedure, verify compatibility and ensure electrical isolation or grounding are not compromised.
- Care must be taken when inserting this or any uterine manipulation device to avoid advancing the device incorrectly (e.g., too far or too quickly). Device insertion should be easy, smooth and controlled to minimize the risks of trauma to the patient or damage to the device.
- If uterine specimen is not easily delivered through the vaginal canal, release the rotational anchor and remove the McCarus-Volker FORNISEE® SYSTEM from the patient, then remove the uterine specimen using alternative techniques.
- Always assure insulation, camera position and device usage are optimized and the uterus is viewed under direct visualization.
- Avoid damage to the FS® DEVICE or FS® SOUND from the direct application of surgical instruments, like forceps, needle holders, clamps, etc.
- Use of this technology requires appropriate laparoscopic surgical techniques for minimally invasive gynecologic surgery based on the surgical circumstances and the experience of the surgeon.
- Always confirm that illumination components are clear of any debris, discoloration or damage that may impede transmission of illumination.

CLEANING & STERILE PROCESSING

After completion of hysterectomy, remove the FS® LIGHT GUIDE from the FS® DEVICE threaded coupler, then remove the FS® DEVICE from the FS® SOUND. Discard the FS® DEVICE according to local biological hazardous material requirements. DO NOT ATTEMPT TO RE-USE THE FS® DEVICE. See detailed processing instructions on PAGE 6.

WARRANTY

There is no defined maximum number of surgical uses for the FS® SOUND. The end of its service lifetime is determined by details of its surgical use and how it is handled between uses. Careful inspection and functional test of the instrument can be used to determine the end of its serviceable life.

MANUFACTURED UNDER ONE OR MORE OF THE FOLLOWING RELATED PATENTS:

U.S. Patent No. 8,603,105. Additional Patents pending.
After routine uterine sounding, grasp anterior lip of cervix with single-toothed tenaculum if desired. Use sterile lubricant to lubricate FS® SOUND. Insert FS® SOUND tip through cervical os with “UP” oriented towards ceiling.

Select appropriate sized FS® DEVICE. Examine sterile pouch for damage. Open package, remove FS® DEVICE using appropriate techniques and lubricate shaft, vaginal occluder and distal cup.

Slide distal cervical cup over cervix.

LUBRICATE

Select appropriate sized FS® DEVICE. Examine sterile pouch for damage. Open package, remove FS® DEVICE using appropriate techniques and lubricate shaft, vaginal occluder and distal cup.

FIG. 3 *Expose and sound uterus in a routine fashion to determine uterine depth and direction. Dilate cervix to accommodate 5mm diameter of FS® SOUND angled shaft.

Advance FS® SOUND into uterine cavity until cervical stop engages external os. Ensure FS® SOUND is secure. Remove tenaculum from cervix if necessary. Stabilize FS® SOUND to prevent accidental dislodging.

Insert FS® DEVICE over proximal FS® SOUND.

Dilate cervix to accommodate 5mm diameter of FS® SOUND angled shaft.

INTRA-OPERATIVE USE

FIG. 4

4a

Retroflexion for anterior colpotomy and bladder flap development.

4b

Anterior View

Left lateral displacement for right lateral colpotomy and right uterine artery dissection.

4c

Anterior View

Right lateral displacement for left lateral colpotomy and left uterine artery dissection.

4d

Anteflexion for posterior colpotomy dissection.
OPTIONAL USE OF *FS® LIGHT WAND*

**FIG. 5**

5a If illumination is desired, slide the *FS® LIGHT GUIDE* over the threaded coupler. Ensure proper alignment of *FS® LIGHT GUIDE* with threaded coupler.

5b Rotate the metal ring on the *FS® LIGHT GUIDE* clockwise until it is fully and tightly seated on the shoulder of the *FS® DEVICE*.

5c Keep the illumination off or on standby except during colpotomy dissection. Use light only when needed and set to lowest viewable level. See WARNINGS pertaining to *FS® LIGHT WAND* illumination.

REMOVAL AND CLEAN UP

**FIG. 6**

6a After hysterectomy has been completed, pull uterus back toward vagina into open vaginal cuff.

6b Deliver uterus and devices out through vaginal canal. Do not use excessive force.

6c Remove specimen and *FORNISSEE® SYSTEM* from surgical field.

6d Rotate the metal ring on the *FS® LIGHT GUIDE* counter clockwise until it releases from the threaded coupler.

6e Lift latch to release *FS® SOUND*. Remove *FS® DEVICE*.

6f Rotate *FS® SOUND* knurled knob counter clockwise to retract anchor. Remove *FS® SOUND*.
FS® SOUND CLEANING & STERILIZATION

FS® SOUND CLEANING INSTRUCTIONS:
Disassemble and clean device immediately after use.

1. Disassemble and discard the disposable FS® DEVICE if still assembled with FS® SOUND.
2. Soak the device(s) in an enzymatic detergent solution for 5-10 minutes. Refer to the detergent manufacturer’s instructions.
3. Rinse device with warm water for a minimum of 1 minute with rotational anchor in each position; deployed and retracted. Flush all channels with a syringe.
4. Thoroughly scrub/brush the device’s exterior surfaces, working drive wire channel and cervical anchor area in deployed AND retracted position, using appropriately sized brushes in detergent/enzymatic solution.
   a. Use a 4mm diameter nylon brush for inside the knurled knob at proximal end. Rotate the knurled knob while cleaning with brush.
   b. Use a 3mm diameter nylon brush to clean the distal rotational anchor while in the deployed position. The wire size of the brush should not exceed 1mm in diameter.
5. If available, place device in ultrasonic bath of appropriate solution, with drive wire channel facing bottom of tank and rotational anchor in deployed position. Activate ultrasonic cleaning bath for a minimum of 5 minutes.
6. Rinse device in warm water for a minimum of 1 minute. Flush all channels with a syringe.
7. Carefully inspect the device to assure that all visible soil has been removed. Repeat cleaning process if soil is detected.

INSPECTION:
Check that the rotational anchor of the FS® SOUND deploys and retracts fully. Check for loose parts. Make sure all exterior surfaces are free of dents, burrs, corrosion, or jagged edges. Do not use if device is bent or damaged. If the FS® SOUND has reached the end of its serviceable life, the device must be disposed of consistent with standard, accepted medical device disposal procedures.

FS® SOUND STERILIZATION INSTRUCTIONS:
The device must be properly cleaned and dried prior to sterilization.

STEAM AUTOCLAVE STERILIZATION:
1. Rotate the knurled knob to place the rotational anchor into the deployed position.
2. The FS® SOUND can be sterilized by steam autoclave with the following parameters (refer to AAMI TIR12): Double wrap the FS® SOUND(s) in sterilization wrap.
3. Perform sterilization cycle with the following parameters:
   - Pre-vacuum cycle: 132°C, Full exposure time at 4 minutes
   - Drying time: 30 minutes

IMMEDIATE USE/ “FLASH” STEAM STERILIZATION:
1. Rotate the knurled knob to place the rotational anchor in the deployed position.
2. Do NOT wrap FS® SOUND in sterilization wrap. Position devices directly into autoclave to allow direct steam exposure to all surfaces.
3. Perform Immediate Use Sterilization with the following parameters:
   - Pre-vacuum cycle: 132°C, Full exposure time at 4 minutes
   - Drying Time: N/A

Device(s) processed by Immediate Use Sterilization should be transferred immediately, using aseptic technique, from the sterilizer to the point of use. Refer to ANSI/AAMI ST79 Comprehensive Guide to Steam Sterilization and Sterility Assurance in Health Care Facilities.

HYDROGEN PEROXIDE GAS PLASMA STERILIZATION (USE ONLY WITH STERRAD NX SYSTEM)
1. Rotate the knurled knob to place the rotational anchor into the deployed position.
2. Observe all safety information in the Sterrad® User’s Guide.
3. Assure device is completely dry.
4. Prepare the device(s) for sterilization according to the Sterrad® User’s Guide and load into unit.
5. Execute the Advanced sterilization cycle per Sterrad® User’s Guide.

During storage, make sure that the instruments remain in a sterile condition and are ready for their next use.
Create the colpotomy incision inside of illumination seal and incision ridge.
