ADVANCE
SURGERY

IMPROVE
OUTCOMES

REDUCE
PAIN

Our approach at LSI SOLUTIONS® is that “Good Enough” is not good enough when helping a sick patient. We recognize that it is our privilege to help enable a positive impact in a person’s life. We are dedicated to improving intra-operative and post-operative patient outcomes by advancing less invasive surgery.

Heart surgeons today frequently offer patients the best therapeutic options for cardiac valve replacement and repair, and for coronary revascularization. Most contemporary heart surgery, however, still forces patients to endure substantial pain during protracted recovery.

We believe heart surgery is now poised for an amazing Renaissance. This new era must be kinder and gentler. Patients must be able to receive the best, most durable therapy with low blood product use and few complications. Patients must also be able to look forward to little pain with rapid recovery and return to regular life.

LSI SOLUTIONS® is excited to support wonderful heart surgeons and their teams across the world with innovative technology, techniques and training. We are grateful to provide meaningful value to society and, most importantly, to patients.
